Brand	DIV.
Subcategory	Tow-recovery
Year of construction	2026
General state	Very good
Reference	446

Description

Description; Wheel Dolly for securing trucks, trailers, semi-trailers or coaches with problems with wheel bearings or past wheels etc. This dolly has its own weight of 160 kg. and a load capacity of 7500 kg. Has 2 swivel and 2 fixed wheels so that it can easily go through a corner even at full weight. It is a tool to tow heavy vehicles in a safe and fast way to a first parking lot or motorway exit with a maximum speed of approximately 10 km per hour. This is a design of our own as we see this product as a welcome addition with 40 years of experience with the Hoist and Salvage work, because we use this product we are even more flexible when towing stranded heavy vehicles. Since when using this dolly we do not have to burden the other traffic with extra traffic jams by having to turn on the highway in order to get the recovery vehicle behind the stranded vehicle to pick it up from behind. The dolly is equipped with high-quality coated wheels and is completely powder coated. This product is used under the full responsibility of the recovery company.
